

## The latest technology...

**Roundness and cylindricity gages are getting less expensive. Have you noticed they are not necessarily getting better?** Why not take the roundness gage that you already own and interface it with the latest technology? TrueRond software combines the power of Microsoft™ Windows™ with the latest algorithms and data visualization tools. Do you use roundness or cylindricity measurement systems from more than one manufacturer? We can provide a common user interface to operate all of those gages. Training time can be reduced. Operator confidence can be increased. Correlation can be enhanced without the need for expensive hardware purchases. Whether you need application engineering or customer support, we are only a phone call away. Please contact us for more information.
